

2.5 WEEKS — ONLINE & AI-GUIDED

Agentic AI Intensive

A 2.5-week executive intensive from Harvard Data Science Review

For mid-to-senior leaders who need to make agentic AI decisions, not write the code behind them. Over 2.5 weeks, participants build a clear agentic AI strategy for their own organization and leave with three production-ready planning documents they can take straight to their leadership and their technical teams. No coding background required.

PROGRAM AT A GLANCE

Intensive by design – be decision-ready in weeks, not months.

A focused intensive built around three planning documents that consolidate into an agentic AI strategy for your organization. Designed for working leaders, with most of the work self-paced around senior calendars.

Duration	2.5 weeks · intensive by design
Time commitment	Approximately 20–25 hours total, self-paced between sessions
Live sessions	Three 60-minute sessions · Tuesdays at 12:00 PM ET · all recorded
Optional sessions	Wednesday and Thursday industry sessions · recordings available
Format	Live online plus AI-guided self-paced work
AI personalisation	Paski AI tutor, calibrated to your role and organization from day one
Tuition	Listed on the program page
Certificate	Certificate of Completion from the Harvard Data Science Initiative

What participants leave with

- The program produces three artefacts your team keeps:
 - **An Agentic AI Workflow** — a high-value workflow from our context, designed end to end.
 - **A Use Case Canvas** — prioritized agentic opportunities mapped for your team.
 - **An Implementation Brief** — a roadmap with risk controls, resourcing, and a technical brief.
- **A firm understanding of the A.G.E.N.T. methodology (Audit, Gauge, Engineer, Navigate, Track)** which I can reuse for future initiatives and share with the team – so the value extends well past one workflow.

WHY THIS MATTERS NOW

The gap is opening between organizations that can deploy agentic AI and those still exploring it.

Most enterprise GenAI efforts never reach production. Research puts the figure at **95%**, and the failure point is rarely the technology. It is implementation strategy: the wrong workflows, unclear governance, no way to measure value. (*Source: MIT NANDA, The GenAI Divide: State of AI in Business 2025.*)

The organizations that get it right are already seeing returns. Agentic AI has been associated with a **5% revenue lift**, and **more than 10% reduction in operating costs**. (*Source: Kearney, The Age of the Agents.*)

95%

of enterprise GenAI efforts
never reach production

+5%

revenue lift associated with
agentic AI adoption

>10%

reduction in operating costs
at organizations that get it
right

This program puts a leader on the right side of that gap. The cost of the program is modest set against the cost of a single failed pilot, which typically runs into the tens or hundreds of thousands of dollars in wasted vendor fees, team time, and lost ground. A leader who can direct agentic AI well pays for the investment many times over with the first decision it informs.

CURRICULUM STRUCTURE

Built on the A.G.E.N.T. framework

Three live Tuesday sessions anchor the program, led by Harvard Data Science Review board members and authors. Between sessions, participants work at their own pace with Paski, building each deliverable against their real organizational context. Everything maps to A.G.E.N.T., the methodology participants keep and reuse.

Before Week 1 · Onboarding and foundations

A 20-minute onboarding conversation with Paski calibrates the program to your role, industry, and challenges. Foundational material adapts to your level, and you begin your first agentic AI strategy draft before the first live session.

Week 1 · The agent-first imperative

What an agent is, how agentic AI changes the shape of work, and how to articulate an agent-first vision for your organization.

Deliverable underway: agentic workflow vision and current state documented.

Week 2 · Strategy and workflow design

The A.G.E.N.T. framework in depth: auditing current workflows, gauging value and complexity, and redesigning a high-value workflow for agent-first operation, with governance considered throughout.

Deliverable underway: Use Case Canvas and draft Agentic AI Workflow.

Week 3 · Change management, KPIs, and preparing implementation briefs

Governance framework, human-agent role definitions, change management plan, ethical and regulatory considerations. Participants complete their strategic implementation plan.

Deliverable complete: full strategy and implementation brief.

The A.G.E.N.T. framework

- A** **Audit** — map current workflows, identify pain points, define desired outcomes.
- G** **Gauge** — assess repeatability, complexity, and value; quantify the impact.
- E** **Engineer** — redesign workflows for agent-first operation and define agent roles.
- N** **Navigate** — governance, human-agent collaboration, change management, stakeholder alignment.
- T** **Track** — define success metrics, build feedback loops, plan for continuous improvement.

FACULTY

Harvard Data Science Review board members, authors, and practising consultants

The program is taught by Harvard Data Science Review board members and authors, alongside practising AI consultants from DAIN Studios who advise enterprises on agentic systems.

Prof. Xiao-Li Meng

Harvard University · HDSR Editor-in-Chief

Prof. Stephanie Dick

Simon Fraser University · socio-technical systems and change management

Dirk Hofmann

DAIN Studios · co-author of the A.G.E.N.T. framework

Dr. Ulla Kruhse-Lehtonen

DAIN Studios · co-author of the A.G.E.N.T. framework

Personalized from day one

Paski is the program's AI tutor, purpose-built for this curriculum rather than a general-purpose tool. A 20-minute onboarding conversation calibrates it to each participant's role, industry, and challenges. From there it adapts every tutorial and example to their context, retains that context across the full program, and gives continuous feedback on each deliverable as it takes shape. It works within a Harvard-curated knowledge base built for this program.

YOUR AGENTIC AI STRATEGY

What participants build

Three artifacts, built across the program and anchored in the participant's own organization. These are strategic planning documents, not code. A leader can present them to their board and hand them directly to a technical team.

Agentic AI Workflow

- A high-value workflow redesigned for agent-first operation
- Governance checkpoints integrated
- Human-agent collaboration patterns mapped
- Ready for a technical team to implement

So a leader can show exactly how agentic AI changes a real process in their organization.

Use Case Canvas

- Agentic AI opportunities identified and prioritised
- A roadmap for expanding beyond the first workflow
- A framework for evaluating future opportunities

So a leader can point to where agentic AI creates value first, and where it goes next.

Implementation Brief

- Timeline and phases for deployment
- Resource requirements across technical, human, and budget
- Success metrics and a tracking approach
- Risk controls and governance mechanisms
- Build-versus-buy decisions with vendor evaluation criteria
- A technical brief for engineering teams

So when leadership, compliance, or engineering ask what comes next, the answer is specific and ready.

Participants also leave with the A.G.E.N.T. framework itself, ready to apply to future agentic AI projects across the organization.

ENROLMENT

How to apply

Current tuition and any active offers are listed on the program page:

live.hdsrcourses.org/agentic-ai-intensive

To earn the Certificate of Completion from the Harvard Data Science Initiative

- ✓ Attend or watch the recordings of the three Tuesday live sessions
- ✓ Complete the AI-guided activities
- ✓ Submit the three strategy and framework documents by the cohort deadline

NEXT STEPS

- 1 Apply at live.hdsrcourses.org/agentic-ai-intensive (approximately 5 minutes).
- 2 Finalize your enrollment by making payment and receive immediate access to the AI Campus platform.
- 3 Begin the Paski onboarding and pre-work straight away.
- 4 The cohort opens with the first live session at 12:00 PM ET.

You also have the option to make a \$100 deposit to reserve a place. This unlocks immediate platform access, including the Paski onboarding conversation and pre-work. The deposit is applied toward tuition rather than charged on top of it, and it is fully refundable until applications close.

This program is delivered by Harvard Data Science Review in collaboration with Next Gen Learning. Certificates are issued by the Harvard Data Science Initiative upon completion.
